### **EXPENSES**

We can't calculate your particular cost structure, but we can tell you what line items the **TreeDiaper**<sup>®</sup> will exponentially reduce.

Tree failure and replacement What would it mean to your bottom line if you stopped having to take out and replace dead trees? Hand watering How much are you spending transporting and delivering water to your trees? Water bills What would your water bill look like if you shrunk it by 90% or more?

Labor and maintenance What would your margins look like if you could avoid the costs associated with tree watering and replacement?

Some of the organizations already transforming their margins with TreeDiaper®

## Save Trees. Save Labor. Save Water. Save Money

#### "We're seeing better root development and overall tree health in our parks"

Hanover County Parks

#### "Greatest Utility Where Irrigation and Mulch Systems are not available"

Colorado State University/Western Colorado Research Center

The Tree Diaper has saved us a lot of labor in removing and replacing the previous gator bags. The fact that you could put mulch over the top has helped with the invariable lawn mower impacts that happen around the trees. We haven't used them for the full 3 year period, but initial impressions are that they save labor and reliably water our new trees. We recommend them to anyone who has trouble with getting their gator bags filled on a regular basis.

Terry Cichoki Village Forester - Northbrook, IL Tree Diaper is a game-changer. We are saving one day's worth of labor each week on our orchard by not having to water. Our investment in TreeDiaper paid off in 60 days! I highly recommend TreeDiaper if you enjoy saving money and water, while growing healthy trees!

Joel Topham -Former Grounds Manager Arbor Day Farms of the National Arbor Day Foundation

Well suited for young grapevines during the 2-3 year establishment period, when the vines are most sensitive to water stress and more growth is desired to bring them into production. I was also impressed with the potential for weed suppression while reducing herbicide inputs and conserving valuable water resources

### **Virginia Vineyard Association**

#### "Very encouraging results, and looks much better than those ugly green bags!"

Luke McCall, Former Arborist - Richmond, Virginia
