

Channels Air, Water and Nutrients Normally Restricted by Mulch, Compact Soils and Weed Fabrics!

Make Irrigation More Effective.

- Standard model lies flush with ground to capture rain and irrigation water
- Irrigation model channels 1/2" drip line, bubblers or emitters to the stake
- S-models for rootballs, bushes, planters hanging baskets and shrubs
- L-models for trees

Standard - Flush Mount Applications

Irrigation - Works with Bubblers & Emitters

Big Benefits. Small Package.

- Reduces stress and plant loss saving time and money
- Improves tree and plant survival rates by getting air and water past the mulch, weed fabrics and compact soils
- Promotes root regeneration and recovery
- Ideal length to efficiently target the root absorbing zone
- Install with a rubber mallet in seconds
- Small models perfect to penetrate soil crust on planters and hanging baskets

Caps are removable to make standard versions into irrigation models!

Run Drip Lines through top to effectively deliver irrigation and avoid runoff!
